

## ***OIL-AWAY - Dry, Waterless Concrete Cleaner***

**OIL-AWAY** is a solution to a very common problem found in toll lanes: The product provides an effective method of cleaning oil stains from concrete without the use of water. **OIL-AWAY** is a DRY concrete cleaning powder that you spread over concrete using a broom head applicator. This concrete cleaner is an activated enzyme that immediately begins to work by breaking down embedded oil stains. There is NO need to sweep up the powder when finished. No water is needed at any time and is never used in the process.

**OIL-AWAY** is an easy-to-use, affordable and completely safe alternative to ineffective, time-consuming, and costly de-greasers and/or power washing approaches. **OIL-AWAY** works itself deep into the pores of concrete to remove the stain from below the surface of the toll lane by breaking down the oil stain at the molecular level.

**OIL-AWAY** uses nature's own biochemistry to completely remove petroleum linked stains from concrete leaving a clean, bright, skid resistant surface. The result is a safer lane surface for collectors, operations personnel, and maintenance staffs to walk on. Clean lanes also reduce the chances of vehicles skidding or sliding while entering and exiting the lane area.

**OIL-AWAY** is a "time driven" process that requires ***absolutely no water, and no rinsing***. Therefore, using the product instead of de-greasers/power washers totally eliminates toxic water run-off known to be harmful to soil, underground watersheds, oceans, lakes and streams. Since no water is used, there is no need to incur the high costs of reclaiming and proper disposal of contaminated water; an ever-present byproduct of power washing processes.

**OIL-AWAY** is fast, effective and safe to walk/drive on immediately after it is applied. Lanes can be opened to traffic immediately after application.

**OIL-AWAY** is a non-toxic, non-hazardous and environmentally friendly cleaner/depollutant.

**OIL-AWAY** is easy to apply: *"Just Sprinkle and Sweep OIL-AWAY into the concrete"*. The product consumes oil and when the process is finished, there is nothing left to clean up and dispose. No oil and no residue. Using **OIL-AWAY** is a one-step process.

### **How does OIL-AWAY help the Environment?**

One quart of oil can contaminate 100,000 gallons of drinking water. With over one billion vehicles leaking some type of fluid into the environment, today's roadways are a prime cause of water pollution. Toll lanes, with slow moving vehicles with hot engines prone to leakage, are especially vulnerable to collecting oil.

**OIL-AWAY** contains "Eco-friendly" active Bi-organics created to consume petroleum based stains such as oil, grease, gasoline, kerosene, jet fuel, hydraulic fluid, and diesel fuel leaving a clean bright surface. **OIL-AWAY** is fast, effective, non-hazardous to humans, plants, and animals. It's safe, and easy to apply. The only tool needed is a broom. **OIL-AWAY** is nature's way of protecting the environment and safeguarding groundwater and soil resources.

Tolltex, Inc., is the exclusive distributor of **OIL-AWAY** for the toll collection industry. Please contact us for more information.
